PROFESSIONAL SUMMARY

Frontend Engineer with hands-on experience building production-grade web applications using React, Next.js, and TypeScript. Background spans interactive platforms, mobile applications, and government-contracted projects, demonstrating proficiency across the full development lifecycle. Known for leveraging AI-assisted development tools to enhance delivery speed without compromising code quality, and for translating complex requirements into polished digital solutions in remote and independent work settings.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, Tailwind CSS, shadcn/ui, Framer Motion, Bootstrap, CSS Modules

Backend & Infra: REST API, Spring Boot, PostgreSQL, Redis, Docker, Vercel, Railway

Tools & AI: Git, Claude Code, Cursor, Google Gemini API, Prompt Engineering

WORK EXPERIENCE

Independent Developer

2023 – Present

Self-Initiated Projects

- Independently architected and deployed two production-grade web applications end-to-end, covering backend API design, frontend development, and cloud infrastructure provisioning on Vercel and Railway.
- Executed the complete development lifecycle across both projects: requirements gathering, system design, component architecture, implementation, testing, and iterative improvements driven by real user feedback.
- Leveraged AI-powered development tools (Claude Code, Cursor) to accelerate feature delivery while upholding strict standards of code quality, maintainability, and architectural integrity.
- Designed and integrated third-party APIs including Google Gemini API for AI-driven scenario modeling, demonstrating ability to ship intelligent, data-driven frontend experiences.
- Managed all aspects of deployment pipelines, environment configuration, and post-launch monitoring independently, simulating a full remote engineering workflow.

Project-Based Developer

Oct 2022 – Dec 2022

Ministry of Tourism and Creative Economy, Manado, Indonesia

- Engineered an interactive 360° virtual tour using Marzipano, showcasing 8 tourist destinations across the Likupang region; delivered under government contract and published at mylikupang.com.
- Designed and implemented intuitive hotspot navigation and scene transitions, enabling visitors to explore locations with a seamless, immersive browsing experience.
- Conceived and developed a local product catalog spanning three categories — culinary, handicraft, and accommodation — fully integrated into the tourism platform.
- Coordinated directly with the Ministry's project stakeholders to gather requirements, validate deliverables, and ensure timely handoff within a two-month engagement.

Mobile Application Developer

Mar 2022 – Aug 2022

SpiritKawanua News, Manado, Indonesia

- Developed a full-featured Android news application in Java for a Kominformo-affiliated media outlet, integrating REST API consumption, WebView rendering, and Firebase push notification services.

- Implemented content synchronization with the outlet's backend CMS, ensuring articles and breaking news updates were delivered to users in real time.
- Optimized application performance for mid-range Android devices common in the target market, focusing on efficient network calls and smooth UI rendering.

Freelance Web Developer
Self-Employed, Manado, Indonesia

2021 – 2023

- Managed full-cycle client projects covering requirements analysis, UI/UX design, and deployment, utilizing React, Bootstrap, and CSS across diverse industries.
- Delivered responsive, cross-browser-compatible interfaces and maintained ongoing client relationships through iterative feedback cycles.
- Handled project scoping, timeline estimation, and direct client communication independently across all engagements.

SELECTED PROJECTS

- Aegis — AI Financial Stress Tester**
aegis-fire.vercel.app | github.com/ChrisSlat0910/aegis
- AI-powered tool that simulates macroeconomic stress scenarios — including market crashes, inflation spikes, and interest rate shifts — and evaluates user portfolio resilience using the Google Gemini API.
 - Built with React and TypeScript; features dynamic scenario configuration panels, real-time result visualization with interactive charts, and a responsive layout deployed on Vercel.
 - Designed the prompt engineering layer to extract structured financial analysis from the Gemini API, translating raw LLM output into actionable risk assessments displayed in the UI.
- Vendly — Community Marketplace**
vendly-eta.vercel.app | github.com/ChrisSlat0910/vendly
- Full-stack marketplace platform with a Spring Boot backend featuring JWT authentication, Redis-based rate limiting, AOP-enforced admin access guards, 20 Flyway database migrations, and PostgreSQL full-text search.
 - Next.js frontend with live listing preview, a seller dashboard for inventory management, and an admin panel for platform moderation — deployed on Railway (backend) and Vercel (frontend).
 - Architected a clean separation between buyer, seller, and admin roles with role-based UI rendering and protected API routes throughout the application.

EDUCATION

- Master of Science in Informatics Engineering**
Hasanuddin University (Universitas Hasanuddin), Makassar, Indonesia
- 2024 – Present
- Bachelor of Applied Science (D4) in Informatics Engineering**
Manado State Polytechnic (Politeknik Negeri Manado), Manado, Indonesia
- 2019 – 2023
- GPA: 3.55 / 4.00
